Project Development Phase
Model Performance Test

Date	27 June 2025
Team ID	LTVIP2025TMID44008
Project Name	Transfer Learning-based Classification of Poultry Diseases for Enhanced Health Management
Maximum Marks	

Model Performance Testing:

Model Summary

When using a pre-trained model like ResNet50 or EfficientNet in transfer learning, the model.summary() displays:

- The layer-wise architecture of the model
- Number of trainable and non-trainable parameters
- The input and output shapes at each layer

Training Accuracy

- This reflects how well the model fits the training data.
- Ideally, it should increase over epochs.
- Too high (>98%) training accuracy might indicate overfitting, especially if validation accuracy is much lower.

Validation Accuracy

- Indicates the model's generalization on unseen data.
- It should ideally track close to training accuracy.
- A large gap implies overfitting.
